

Solution Requirements

Date	28 June 2026
Team ID	
Project Name	Personalized Networking Assistant
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Event Analyzer	Fast zero-shot classification to extract up to 3 themes from event descriptions.	High
2	Conversation Prompter	GPT-2 Small text generator pipeline to produce human-like networking icebreakers.	High
3	Fact Checking API	Wikipedia lookup integration for quick fact validation on buzzwords in real-time.	Medium
4	Session History Logging	Save complete session inputs and generated prompts in history.json.	High
5	Feedback Capture	Log users' thumbs up/down ratings for suggestion accuracy in feedback.json.	Medium
6	API Routing Layer	FastAPI endpoints (/analyze-event, /fact-check, /generate-conversation, /feedback).	High
7	Interactive Frontend	Streamlit UI displaying input panels, recent starters list, and logged feedbacks.	High

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	Theme classification must execute instantly for user retention.	Extract themes in < 1.0 seconds.
2	Scalability	FastAPI and Streamlit single-process server load capacity.	Supports concurrent page loads via Streamlit session state.
3	Data Privacy	Store interaction logs locally without external data leaks.	All logs persisted in local JSON files.
4	Reliability	Fail-safe error handling for external Wikipedia API fetches.	Catches network timeouts and returns clean fallback warnings.
