

Technology Stack

Date	28 June 2026
Team ID	
Project Name	Personalized Networking Assistant
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution.

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend UI	Streamlit (Python)	Fast, reactive components perfect for prompt engineering and rapid prototyping.
2	Backend Server	FastAPI, Uvicorn (Python)	High-performance asynchronous execution, auto-generated Swagger OpenAPI, and robust type safety.
3	NLP Classification	DistilBERT zero-shot classifier	Fast zero-shot classification without needing custom pre-trained label weights.
4	Text Generation	GPT-2 Small	Compact generative pipeline runs efficiently on standard hardware without GPU.
5	Data Layer	Local JSON files (history.json, feedback.json)	Lightweight storage layout which is perfect for single-user local auditing.
6	Third-Party API	Wikipedia REST API	Public knowledge lookup endpoint to retrieve real-time factual term summaries.
